

Four Channel, Ultra Low-Dropout, Constant-Current White LED Bias

Features

- Ultra Low 150mV Dropout at 20mA
- 0.6% High Accuracy Current Matching
- 20mA Full Scale Current
- 32 Level Linear Current Brightness Control
- PWM Brightness Control
- 2.5V to 5.5V Supply Voltage Range
- MSOP-8 Package

Applications

- Mobile Phones
- White LED backlighting

General Description

The G5921 is a high performance ultra low-dropout constant current bias supply for white LEDs. It can be used as an alternative to the simple ballast resistors in conventional parallel white LEDs applications. Each white LED bias current is matching to 0.6%.

For dimming control, an enable input pin is controlled by processor GPIO output pulses for 32 level linear current. Using a low frequency PWM waveform to this enable input pin also controls the average LED current which is proportional to the PWM duty.

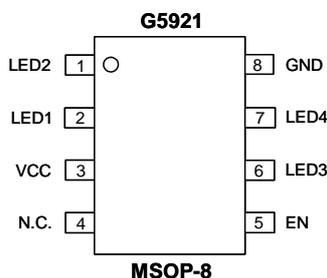

The G5921 is suitable for single cell Li-ion battery power device that using low forward voltage white LEDs. The white LEDs can be powered directly from battery without extra external components. This takes an advantage of highest efficiency and creates no EMI problem.

**Absolute Maximum Ratings**

VCC to GND. -0.3V to +7.0V
 EN, LED1, LED2, LED3, LED4, to GND
 -0.3V to VCC+0.3V
 Operating Temperature Range. -40°C to 85°C

Junction Temperature. 125°C
 Storage Temperature. -65°C to 150°C
 Reflow Temperature (soldering, 10sec) 260°C

Stress beyond those listed under "Absolute Maximum Rating" may cause permanent damage to the device.

Block Diagram

Function Description

G5921 LED pins act as well matched current source driving LED diode to ground. An EN pin is used to turn on and turn off G5921.

When applying a lower frequency (less than 2kHz) PWM waveform to EN pin, the average LED current will be duty*20mA(typical). Refer to Fig.1

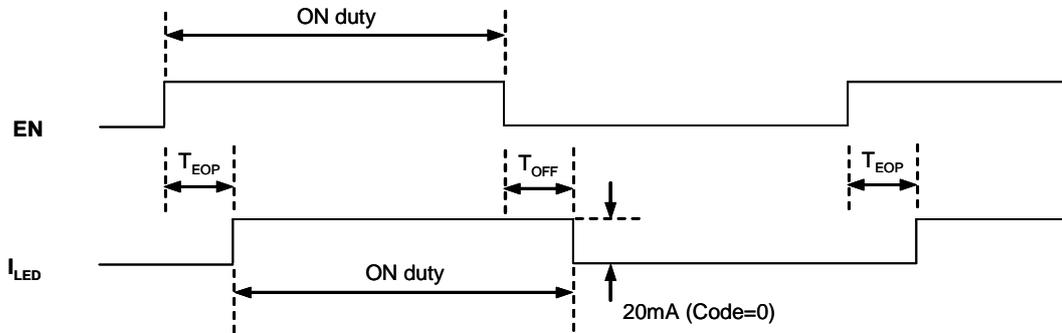

Fig.1 Turn ON to PWM dimming

If the application is not suitable to apply such a low frequency PWM dimming waveform, this EN pin can be negatively pulsed to set continuous LED current. When no negative pulse is input to EN pin (Code=0), the internal register will be latched to set the maximum

LED current, typically 20mA. Whenever input N negative pulses to the EN pin, it will get a LED current corresponding to Code N. In this manner, LED current will be changed from previous value to new value after the last pulse for typical 80μs (T_{EOP}). Please refer to Fig.2

Package Information

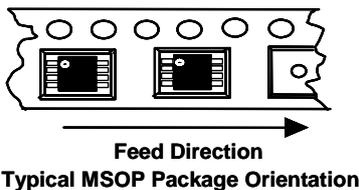

MSOP-8 (P8) Package

Note:

1. Package body sizes exclude mold flash and gate burrs
2. Dimension L is measured in gage plane
3. Tolerance 0.10mm unless otherwise specified
4. Controlling dimension is millimeter converted inch dimensions are not necessarily exact.
5. Followed from JEDEC MO-137
